Google Developer Student Clubs

SQL Project - HackerRank Questions

Project Overview

In this project you need to solve 6 SQL questions from the HackerRank website and copy the used code into a separate .sql file.

Project Description

Practice SQL through these simple SQL questions and try to solve more on your own time to keep your SQL skills sharp.

Requirements

Solve the following problems:
1. Revising the Select Query I
2. Japanese Cities' Attributes
3. Weather Observation Station 1
4. Higher Than 75 Marks
5. Type of Triangle
6. New Companies

Submission

- Each question in the requirements must be solved and the code used should be put in a separate .sql file.
- You should name the sql files the same name of the problem solved.

Guidance and Recommendations

- This was the easiest and most practical way to practice sql + I find it fun 🤩
- If you feel stuck or in need of help DO REACH OUT to me (Rasheed) or your moderator from the tech team and we'll definitely help 😊
- Try not to use AI or the solutions on the website since it's spoils the fun 😕

Best of luck 💪
